		Page 291
1	A Yes.	10:26AM
2	Q So you've seen the data but you haven't seen it	
3	represented in this format, correct?	
4	A Correct.	
5	Q Okay. Are any of the years we have phosphorus	10:27AM
6	data, which is on Page 14 of Figure 7, does lake one,	
7	which is the lacustrine and lake two, which is the	
8	lacustrine area, come to an average summer mean	
9	phosphorus of eight let's not look at the	
10	phosphorus, excuse me. Chlorophyll-a. Look at	10:27AM
11	chlorophyll-a. It's on Page 2. For Lake 1 and 2, the	
12	lacustrine areas, do you see any time period where it's	
13	at eight?	
14	A No.	
15	Q Let's hold that for a second, go back to my other.	10:27AM
16	When you make this statement in 224, on Page 224 of	
17	your report, that there's similar water quality, what	
18	are you evaluating in terms of water quality when you	
19	compared these reservoirs? I think it was Hugo and	
20	Sardis to Tenkiller?	10:28AM
21	A Chlorophyll levels, phosphorus levels, and	
22	dissolved oxygen profiles.	
23	Q Okay. Do you know Dr. Cooke?	
24	A Not personally.	
25	Q Do you know his reputation?	10:28AM

			Page 292
1	A Ye	es.	10:28AM
2	Q W	hat is his reputation?	
3	A H	is reputation is as a quality limnologist.	
4	Q W1	hat about Dr. Welch?	
5	A I	don't know Dr. Welch.	10:28AM
6	Q Do	o you know his reputation?	
7	A No	o, not as much.	
8	Q Do	o you know Dr. Jack Jones at the University of	
9	Missou	ri?	
10	A N	0.	10:28AM
11	Q D	o you know of his reputation?	
12	A N	0.	
13	Q 0:	n Page 224, it appears that you actually did form	
14	a hypo	thesis for this section as opposed to 2-7, is	
15	that c	orrect?	10:29AM
16	A Y	es.	
17	Q O	kay. What is your hypothesis that you want to	
18	test i	n this section?	
19	A T	hat in the absence of poultry litter there would	
20	be min	imal or no water quality issues.	10:29AM
21	Q O	kay. And how did you test the hypothesis? Do	
22	you wa	nt to read from your report? You don't have to.	
23	A W	e tried to find other lakes that we could compare	
24	to Ten	killer that had similar water quality to	
25	determ	ine whether, in fact, they had poultry litter to	10:29AM

-		Page 293
1	test the hypothesis that in order to have such water	10:29AM
2	quality would require poultry litter, all other things	
3	being equal.	
4	Q And you selected which two lakes or reservoirs?	
5	A Lake Hugo and Sardis.	10:30AM
6	Q Okay. And what were your criteria for selection	
7	of Hugo and Sardis?	
8	A The first criteria were reservoirs that had	
9	similar water quality.	
10	Q Okay.	10:30AM
11	A The second criteria was reservoirs that had	
12	similar land use patterns in the watershed.	
13	Q Okay.	
14	A The third criteria was to get as close to similar	
15	eco-region as we could. And the fourth criteria was to	10:30AM
16	try to get systems that had similar lake surface area	
17	to watershed area.	
18	Q Any other criteria?	
19	A I'm sure there were others. Those are the ones	
20	that come to mind.	10:30AM
21	Q I guess one of the criteria might have been	
22	whether or not they had poultry in the watershed or	
23	not, land use?	
24	A Yes, yes, of course.	
25	Q Did you determine whether or not Hugo and Sardis	10:31AM
I		

		Page 294
1	watersheds had few poultry operations?	10:31AM
2	A We determined they had very few poultry	
3	operations.	
4	Q How did you determine that?	
5	A We, as I recall, worked with Dr. Sullivan in	10:31AM
6	trying to determine poultry house density from aerial	
7	photography.	
8	Q Do you have any reference or information in your	
9	report that supports your conclusion that they had few	
10	poultry operations?	10:31AM
11	A I have not checked. As it indicates here, I may	
12	have misspoken.	
13	Q Can you tell us where you're referring to, Doctor?	
14	A I'm sorry. Table 29, there's a footnote.	
15	Q 29, okay.	10:31AM
16	A Poultry, cattle and swine animal units acquired	
17	from personal communications with Wally Jobes.	
18	Q Who is Wally Jobes?	
19	A I don't recall. I would have to check.	
20	Q So if Wally Jobes is wrong then the analysis would	10:32AM
21	have that flaw?	
22	A Yes.	
23	Q Okay. Do you know, did you check to see if	
24	there's any wastewater treatment plant discharge in	
25	either Hugo or Sardis watersheds?	10:32AM

		Page 295
1	A We reviewed the EPA database to see whether there	10:32AM
2	were permits for discharge in the watershed.	
3	Q And were there?	
4	A Nothing of any consequence, no.	
5	Q Were there wastewater treatment plant discharges	10:32AM
6	in the Hugo and Sardis watersheds?	
7	A I don't recall now whether there were any at all.	
8	We certainly concluded that they were not of	
9	consequence, but I'm not recalling whether that meant	
10	that it was zero.	10:33AM
11	Q What was your basis for lack of little	
12	consequence?	
13	A Design flow.	
14	Q And do you have any documentation of that here in	
15	your report?	10:33AM
16	A No, that would be in considered materials.	
17	Q Did you determine whether or not there were any	
18	permitted CAFOs? Do you know what a CAFO is?	
19	A No.	
20	Q Combined animal feeding operations in watersheds?	10:33AM
21	A I don't recall.	
22	Q Do you know whether Mr. Jobes determined whether	
23	or not there was any permitted CAFOs in those	
24	watersheds?	
25	A I do not.	10:33AM

,			Page 296
1	Q	Let me hand you what's marked as Exhibit 15.	10:34AM
2		Do you see the source of this information	
3	down	here in the left, sir? Sources land use,	
4	nati	onal land code, database. Are you familiar with	
5	that	source, sir?	10:35AM
6	A	Yes, I am.	
7	Q	Are you familiar with Oklahoma Department of	
8	Agri	culture, Food and Forestry?	
9	А	Yes, sir.	
10	Q	And USEPA for wastewater requirements?	10:35AM
11	A	Yes.	
12	Q	Okay. Can you identify, sir, how many CAFOs there	
13	are	in the Sardis watershed on Exhibit 15?	
14	А	Some of these are overlapping, so probably I can	
15	not.		10:36AM
16	Q	Okay. But looks like there's maybe about an eight	
17	to t	en?	
18	A	Something on that order.	
19	Q	And what about in the Hugo watershed?	
20	A	Maybe another ten.	10:36AM
21	Q	Okay. And are there other POTWs within the Hugo	
22	wate	rshed?	
23	A	This is a little bit like Where's Waldo.	
24	Q	We've got some marks on here. They've tried to	
25	labe	l them.	10:36AM

			Page 297
1	A	Okay.	10:36AM
2	Q	But I admit it's hard to find the dashes there in	
3	all	the information.	
4	A	Yes.	
5	Q	Okay. How many are there within the Hugo	10:36AM
6	wate	rshed?	
7	A	Appears there are three.	
8	Q	What are the discharges of phosphorus from those	
9	publ	ic works authorities, do you know?	
10	A	I do not.	10:37AM
11	Q	Did you evaluate that when you did your analysis?	
12	A	One of the staff working for me did.	
13	Q	Okay. And are those results reflected anywhere in	
14	your	report?	
15	A	No, sir.	10:37AM
16	Q	Do you know whether Mr. Jobes used the	
17	info	rmation, Mr. Jobes, Wally Jobes, that you	
18	refe	renced there, used the information seen on Page 2	
19	of t	his report on a number of animals in CAFOs as	
20	repo	rted by the Oklahoma Department Agriculture?	10:37AM
21	A	I would have to check. I don't know.	
22	Q	Do you have any report from Mr. Jobes in your	
23	cons	idered materials or was it just simply a verbal	
24	conv	ersation where he gave you the data in Table 2-9?	
25	A	I don't know.	10:38AM

		·····
		Page 298
1	Q Says "personal communication." Was that your	10:38AM
2	personal communication or someone else's?	
3	A Someone else's personal communication.	
4	Q Dr. Connolly, when you did your analysis of your	
5	hypothesis comparing these reservoirs, was it important	10:38AM
6	that you compared reservoirs that had similar	
7	characteristics?	
8	A Yes.	
9	Q How about the characteristics of a reservoir	
10	impact water quality of a reservoir?	10:38AM
11	A In numerous ways. The size of reservoir in	
12	comparison to the watershed is important because it	
13	determines the amount of land contributing to the	
14	reservoir relative to the size of the reservoir. The	
15	residence time of the reservoir is important, how long	10:39AM
16	water stays in the reservoir, the depth of the	
17	reservoir as well is important.	
18	Q Is it reasonable then using some of the criteria	
19	you mentioned to compare trophic states of deep	
20	thermally stratified reservoirs with shallow,	10:39AM
21	unstratified reservoirs?	
22	A Can you repeat that question, the front part of	
23	it?	
24	(Whereupon, the court reporter read	
25	back the previous question.)	10:40AM

Page 299 10:40AM Let me repeat the question. Is it reasonable to 1 0 compare the trophic states of deep thermally stratified 2 reservoirs with shallow unstratified reservoirs? 3 Yes, so long as you keep that difference in mind 4 as you're doing the comparison and with the implication 10:40AM 5 of what that difference might be. 6 What is the implication of that difference? The implication of that difference is whether or 8 not in the stratified reservoir you have a source of 9 phosphorus from the sediments that may be important to 10 the water quality of that reservoir. 11 So in an unstratified reservoir there could be an 12 additional source of phosphorus to the epilimnion 13 that's not present during the summer months of a 14 10:41AM stratified reservoir, correct? 15 16 No. So what do you mean by that? I don't understand. 17 Wouldn't an unstratified reservoir have an additional 18 source of phosphorus from sediments that is not present 19 10:41AM in the epilimnion of the stratified reservoir? 20 Object to form. MR. TODD: 21 Not of consequence. 22 And how did you make that determination? 23 In order to have a significant source of 24

10:41AM

phosphorus from the sediments you have to drive the

25

		Page 300
1	water column to near zero or zero dissolved oxygen.	10:41AM
2	Q Don't sediments release oxygen when they're	
3	oxidized also?	
4	A I don't understand what you just said.	
5	Q Are you saying that the only time sediments	10:42AM
6	contribute oxygen to lakes is when they're anoxic	
7	excuse me. The only time that sediments contribute	
8	phosphorus to lakes is when they're anoxic?	
9	A The only time they contribute substantive amounts	
10	of phosphorus is when they're anoxic.	10:42AM
11	Q And what's your basis for that statement?	
12	A That's a well known concept that a limnologist or	
13	engineer working on reservoirs understands. It's in	
14	every textbook.	
15	Q What about shallow lakes?	10:42AM
16	A What do you mean "what about shallow lakes"?	
17	Q Would you expect sediments to contribute	
18	phosphorus to the waters of shallow reservoirs to a	
19	greater degree than deep reservoirs?	
20	A I think I've answered that, that not unless they	10:43AM
21	were going anoxic.	
22	Q Okay. Would you expect a shallow reservoir to	
23	respond the same way to watershed events as a deep	
24	reservoir?	
25	A Not necessarily.	10:43AM
ł		

		Page 301
1.	Q Did you consider when you did your evaluation in	10:43AM
2	2.8, the depths, temperature profiles, and phosphorus	
3	loadings of the three different systems?	
4	MR. TODD: Object to form.	
5	A We did no quantitative analysis of phosphorus	10:44AM
6	loadings. We used land use as a surrogate as a	
7	potential for loadings, but we did consider those other	
8	factors, yes.	
9	Q Did you consider depths?	
10	A Yes.	10:44AM
11	Q And temperature profiles?	
12	A Yes.	
13	Q But you don't consider loading?	
14	MR. TODD: Object to form, mischaracterizes.	
15	A We considered loading in terms of land use	10:44AM
16	characteristics, but made no quantitative assessment of	
17	loading.	
18	Q Well, you didn't actually determine whether the	
19	loading, the actual loading in Tenkiller were	
20	comparable or not to the loading in Sardis and Hugo,	10:44AM
21	correct, the actual phosphorus loadings?	
22	A We did not do a quantitative calculation of	
23	loadings.	
24	Q Okay. You didn't calculate how much phosphorus	
25	was going into Sardis or Hugo, correct?	10:44AM

			Page 302
1	A	Correct.	10:44AM
2	Q	Is that information available?	
3	А	Not as far as I know.	
4	Q	Did you look for it?	
5	A	Yes.	10:45AM
6	Q	Did you look for it from USGS studies?	
7	A	I believe so.	
8	Q	And did you find any?	
9	A	I would have to go back and check.	
10	Q	Let's look at Table 2.8. This is a comparison of	10:45AM
11	wate	rshed characteristics, correct?	
12	A	Yes, it is.	
13	Q	Okay. In Tenkiller, what is the ratio of	
14	wate	rshed area and lake volume?	
15	A	Watershed area and lake volume?	10:45AM
16	Q	Yeah. What is the relative you have watershed	
17	area	there, 1,052,800 acres?	
18	A	Yes.	
19	Q	And the storage acre feed pool?	
20	A	Mm-hmm.	10:46AM
21	Q	Okay. What is the ratio between those two?	
22	A	About 1.7, 1.8 to one.	
23	Q	And how is that compared to Lake Hugo in the same	
24	rese	rvoir?	
25	A	Lake Hugo is probably seven or eight to one.	10:46AM
i			

Page 303 So are they comparable with that metric, that is, 10:46AM 1 Tenkiller to Hugo? 2 No. 3 А So Hugo has a lot smaller water volume with 4 10:46AM approximately equivalent same size of watershed? 5 6 Α Yes. Wouldn't that size of lake volume have a --7 difference in lake volume have an impact on the water 8 quality of the lake when you're trying to compare it to 9 10:46AM Tenkiller? 10 Probably not significant. 11 And what's your basis for that? 12 If you turn to Table 2.10. 1.3 14 Mm-hmm. And you look at residence time, how long water 10:47AM 15 remains in the lake, for Hugo the residence time is 1.3 16 months, which is considerably shorter than Tenkiller, 17 which is 8.8 months. But 1.3 months is sufficient time 18 to allow settling, so that the difference in these 19 volumes here is significant only in the sense of 10:47AM 20 whether or not we can settle out material or whether 21 that material remains in the water column. A 1.3 month 22 residence time is sufficient to settle material out. 23 Not as much settling as you would find in Lake 24 10:48AM Tenkiller, correct? 25

			Page 304
1	A	Probably not that much different.	10:48AM
2	Q	Are you really suggesting there's not that much	
3	diffe	rence in settling between Tenkiller and Hugo when	
4	you h	ave an 8.8 versus a 1.3 residence time?	
5		MR. TODD: Object to form.	10:48AM
6	Q	Is that your testimony, sir?	
7	A	Yes, it is.	
8	Q	And did you do any analysis to justify that	
9	opini	on?	
10	A	Analysis wasn't necessary.	10:48AM
11	Q	What does watershed area to lake volume tell you	
12	about	the reservoir?	
13	A	Tells you something about the likely residence	
14	time.		
15	Q	Okay. Does it tell you anything about dilution of	10:48AM
16	the v	vater?	
17	A	Not a lot.	
18	Q	It doesn't?	
19	A	No.	
20	Q	Wouldn't you expect a reservoir with a shorter	10:49AM
21	resid	dence time to have more dilution by inflow to the	
22	lake	?	
23	A	No.	
24	Q	Doesn't the residence time of Hugo indicate that	
25	Hugo	is highly flushed by the inflow? That is, it has	10:49AM

-			Page 305
1	1.3	versus 8.8 residence time?	10:49AM
2	A	Yes.	
3	Q	And much more flush than Tenkiller, correct?	
4	A	Yes.	
5	Q	So the hydrology of Hugo is different than	10:49AM
6	Tenk	iller, is it not?	
7	A	Yes.	
8	Q	Okay. Now, let's look at Sardis Reservoir. How	
9	does	the watershed size of Sardis compare to Tenkiller?	
10	A	It's about seven or eight times more.	10:50AM
11	Q	About 15 percent?	:
12	A	Mm-hmm.	
13	Q	Wouldn't this have an impact on the the effect	
14	of T	enkiller versus Sardis on the water quality in the	
15	two	reservoirs?	10:50AM
16	A	Yes.	
17	Q	So that makes them not quite as comparable,	
18	corr	ect?	
19	A	It makes them different but as long as you keep	
20	thos	e differences in consideration, you can still make	10:50AM
21	comp	arisons.	
22	Q	How does the volume of Sardis as a storage volume	
23	comp	are to Tenkiller?	
24	A	It's about 35, 40 percent of Tenkiller.	
25	Q	So that's another significant difference, is it	10:50AM

		Page 306
1	not?	10:50AM
2	A Yes.	
3	Q I think you mentioned earlier you're familiar with	
4	the Vollenweider model to predict concentrations in	
5	lakes and reservoirs?	10:51AM
6	A Mm-hmm.	
7	Q Can you tell us what that is?	
8	A Not off the top of my head.	\.\.\.
9	Q Did you perform that analysis on these three	
10	reservoirs to determine whether there would be any	10:51AM
11	effect of the hydrology and characteristics on	
12	phosphorus concentrations?	
13	A No.	
14	Q Okay. Let me hand you what has been marked as	
15	Exhibit 16. This is a document that we've prepared	10:51AM
16	MR. TODD: Go off the record real quickly.	
17	THE VIDEOGRAPHER: We're now off the record.	
18	The time is 10:51 a.m.	
19	(Whereupon, a discussion was held off	
20	the record.)	10:52AM
21	THE VIDEOGRAPHER: We are back on the record.	
22	The time is 10:52 a.m.	
23	Q Dr. Connolly, I've handed you Exhibit 16 where it	
24	shows the a model, a simple Vollenweider model of	
25	Tenkiller to Sardis, doesn't it?	10:52AM

1 Q And would that be affected by the hydrology and 10:56AM morphology of the different reservoirs? A Yes, it would. Q Doesn't if this is correct, doesn't this model indicate that it's difficult to discern relative 10:56AM impacts of poultry in these three different reservoirs? A I can't say one way or the other based on this. Q Let me ask you another question then. If these three different water bodies, Tenkiller, Hugo and Sardis, were similar or identical, wouldn't they model 10:57AM identically or nearly so if they were loaded with the same phosphorus concentrations? A Not necessarily. Q Well, how would you account for the changes then? A Account for the changes? I'm not sure what 10:57AM your Q In phosphorus concentrations, if they're not different, if this model doesn't show that these reservoirs are not functioning differently, for example, we looked at residence time a few minutes ago. 10:57AM Yes. Q And Hugo's residence time is a lot different than Tenkiller's, correct? A Yes. Q And we see a difference in phosphorus 10:58AM	-			Page 310
A Yes, it would. Q Doesn't if this is correct, doesn't this model indicate that it's difficult to discern relative 10:56AM impacts of poultry in these three different reservoirs? A I can't say one way or the other based on this. Q Let me ask you another question then. If these three different water bodies, Tenkiller, Hugo and Sardis, were similar or identical, wouldn't they model 10:57AM identically or nearly so if they were loaded with the same phosphorus concentrations? A Not necessarily. Q Well, how would you account for the changes then? A Account for the changes? I'm not sure what 10:57AM your Q In phosphorus concentrations, if they're not different, if this model doesn't show that these reservoirs are not functioning differently, for example, we looked at residence time a few minutes ago. 10:57AM A Yes. Q And Hugo's residence time is a lot different than Tenkiller's, correct? A Yes.	1	Q	And would that be affected by the hydrology and	10:56AM
Q Doesn't if this is correct, doesn't this model indicate that it's difficult to discern relative 10:56AM impacts of poultry in these three different reservoirs? A I can't say one way or the other based on this. Q Let me ask you another question then. same phosphorus concentrations? A Not necessarily. Well, how would you account for the changes then? A Account for the changes? I'm not sure what 10:57AM your In phosphorus concentrations, if they're not different, if this model doesn't show that these reservoirs are not functioning differently, for example, we looked at residence time a few minutes ago. 10:57AM A Yes. A Yes. Tenkiller's, correct? A Yes.	10	Sard:	is, were similar or identical, wouldn't they model	10:57AM
A Not necessarily. 14 Q Well, how would you account for the changes then? 15 A Account for the changes? I'm not sure what 10:57AM 16 your 17 Q In phosphorus concentrations, if they're not 18 different, if this model doesn't show that these 19 reservoirs are not functioning differently, for 20 example, we looked at residence time a few minutes ago. 10:57AM 21 A Yes. 22 Q And Hugo's residence time is a lot different than 23 Tenkiller's, correct? 24 A Yes.	11	ident	cically or nearly so if they were loaded with the	
Q Well, how would you account for the changes then? A Account for the changes? I'm not sure what 10:57AM your In phosphorus concentrations, if they're not different, if this model doesn't show that these reservoirs are not functioning differently, for example, we looked at residence time a few minutes ago. 10:57AM A Yes. A Yes. A Yes. Tenkiller's, correct? A Yes.	12	same	phosphorus concentrations?	
A Account for the changes? I'm not sure what 10:57AM your In phosphorus concentrations, if they're not different, if this model doesn't show that these reservoirs are not functioning differently, for example, we looked at residence time a few minutes ago. 10:57AM A Yes. A Yes. A Yes. Yes.	13	A	Not necessarily.	
your 17 Q In phosphorus concentrations, if they're not 18 different, if this model doesn't show that these 19 reservoirs are not functioning differently, for 20 example, we looked at residence time a few minutes ago. 10:57AM 21 A Yes. 22 Q And Hugo's residence time is a lot different than 23 Tenkiller's, correct? 24 A Yes.	14	Q	Well, how would you account for the changes then?	
In phosphorus concentrations, if they're not different, if this model doesn't show that these reservoirs are not functioning differently, for example, we looked at residence time a few minutes ago. 10:57AM A Yes. Q And Hugo's residence time is a lot different than Tenkiller's, correct? A Yes.	15	A	Account for the changes? I'm not sure what	10:57AM
different, if this model doesn't show that these reservoirs are not functioning differently, for example, we looked at residence time a few minutes ago. 10:57AM A Yes. And Hugo's residence time is a lot different than Tenkiller's, correct? A Yes.	16	your	~-	
reservoirs are not functioning differently, for example, we looked at residence time a few minutes ago. 10:57AM A Yes. And Hugo's residence time is a lot different than Tenkiller's, correct? A Yes.	17	Q	In phosphorus concentrations, if they're not	
example, we looked at residence time a few minutes ago. 10:57AM A Yes. And Hugo's residence time is a lot different than Tenkiller's, correct? A Yes.	18	diff	erent, if this model doesn't show that these	
21 A Yes. 22 Q And Hugo's residence time is a lot different than 23 Tenkiller's, correct? 24 A Yes.	19	rese	rvoirs are not functioning differently, for	
22 Q And Hugo's residence time is a lot different than 23 Tenkiller's, correct? 24 A Yes.	20	examp	ole, we looked at residence time a few minutes ago.	10:57AM
Tenkiller's, correct? A Yes.	21	A	Yes.	
24 A Yes.	22	Q	And Hugo's residence time is a lot different than	
	23	Tenk:	iller's, correct?	
Q And we see a difference in phosphorus 10:58AM	24	A	Yes.	
	25	Q	And we see a difference in phosphorus	10:58AM

			Page 314
1	Q	That's another difference between Tenkiller and	11:02AM
2	Lake	Hugo and Sardis?	
3	A	Yes.	
4	Q	How can a riverine zone have an impact on	
5	reser	voir processes?	11:02AM
6	A	On what processes?	
7	Q.	On processes that occur in a reservoir, what's the	
8	impac	t of riverine zone on, let's say, eutrophication	
9	proce	sses in a reservoir?	
10	А	It's very site specific, so it's hard to make a	11:02AM
11	gener	al statement about riverine zones.	
12	Q	Well, you seem to have made a notation here about	
13	Hugo	and Tenkiller having a different type of riverine	
14	zones	??	
15	A	Mm-hmm.	11:03AM
16	Q	And Sardis and Tenkiller being different also in	
17	that	regard, correct?	
18	A	Yes.	
19	Q	Okay. So what does that difference does that	
20	diffe	erence have any impact on reservoir processes?	11:03AM
21	That	is the fact that Tenkiller has a long riverine	
22	zone	and Sardis and Hugo do not, does that have any	
23	impac	et on reservoir processes? Let me say it another	
24	way.	Does the lack of riverine zone in Hugo and Sardis	
25	chang	ge their processes and make them distinct from some	11:03AM
i .			

	······································		Page 315
1	of th	ne processes that are occurring in Tenkiller?	11:03AM
2	А	Potentially.	:
3	Q	And what processes would it affect?	
4	A	Where phytoplankton growth may occur in the	
5	reser	rvoir.	11:04AM
6	Q	And does it have any effect on the hydrology of	-
7	the 1	reservoirs? Could it have an effect in that	
8	regai	rd?	
9	A	I suppose but nothing specific that I can think	
10	of.		11:04AM
11	Q	Wouldn't a riverine, long riverine zone tend to	
12	retai	rd the inflow waters into the reservoir so that the	
13	mover	ment could be slower, have an effect on kinetics in	
14	that	regard?	
15	A	The movement of the water	11:04AM
16	Q	Would be slower in the reservoir?	
17	A	Where?	
18	Q	Within the reservoir.	
19	A	Not necessarily.	
20	Q	Would sedimentation processes be affected?	11:04AM
21	A	Perhaps.	
22	Q	And how would they be affected?	÷
23	A	There may perhaps be less sedimentation in the	
24	uppe:	r portions of a reservoir with the riverine section	
25	than	one without.	11:05AM

	Page 316
Q Did you determine whether these potential	11:05AM
differences were, in fact, differences between Sardis,	
Tenkiller and Hugo?	
A No.	
Q Do scouring do you know what scouring is when	11:05AM
we talk about scouring effects on a reservoir?	
A Yes.	
Q What is that?	
A Scouring is the erosion of sediments from the	
bottom of the reservoir.	11:05AM
Q Do scouring effects occur in a riverine zone of a	
reservoir?	
A It would depend upon the reservoir.	
Q Did you determine whether that's going on or not	
in Tenkiller?	11:05AM
A No.	
Q If it was, could that have a big indicate	
another difference between Hugo and Sardis on the one	
hand and Tenkiller on the other?	
A Perhaps.	11:06AM
Q Does scouring influence the delivery of water to	
the reservoir?	
A No.	
Q Does scouring influence the delivery of nutrients	
down the reservoir?	11:06AM
	differences were, in fact, differences between Sardis, Tenkiller and Hugo? A No. Q Do scouring do you know what scouring is when we talk about scouring effects on a reservoir? A Yes. Q What is that? A Scouring is the erosion of sediments from the bottom of the reservoir. Q Do scouring effects occur in a riverine zone of a reservoir? A It would depend upon the reservoir. Q Did you determine whether that's going on or not in Tenkiller? A No. Q If it was, could that have a big indicate another difference between Hugo and Sardis on the one hand and Tenkiller on the other? A Perhaps. Q Does scouring influence the delivery of water to the reservoir? A No. Q Does scouring influence the delivery of nutrients

	-		Page 317
1	A	Perhaps.	11:06AM
2	Q	And can scouring have an effect on turbidity in	
3	down	stream portions of the reservoir?	•
4	A	Perhaps.	
5	Q	And how does that occur?	11:06AM
6	A	By eroding material off the bottom creating	
7	turb	idity in the water and carrying that turbidity	
8	down	stream.	
9	Q	Does the lack of the riverine zone detract from	
10	the '	utility of Hugo and Sardis in comparison with	11:06AM
11	Tenk	iller?	
12	A	To some extent.	
13	Q	Is the potential for internal return of nutrients	
14	from	sediments greater in Sardis and Hugo reservoirs	
15	than	they are in Tenkiller?	11:07AM
16	A	No, not necessarily.	
17	Q	What's your basis for that statement?	
18	A	Well, all three reservoirs are subject to oxygen	
19	depl	etion in anoxic bottom waters. The shallow	
20	rese	rvoirs will not set up as strong a stratification,	11:08AM
21	wher	eas, long stratification as in a deeper reservoir.	
22	So t	hat may have some influence on their ability to	
23	recy	cle phosphorus. And so, if anything, there perhaps	
24	woul	d be slightly less recycle from the sediments than	
25	Hugo	and Sardis, but I would have to go through a much	11:08AM

	•		Page 324
1	repo	rt, sir?	11:33AM
2	A	Yes.	
3	Q	Okay. What are the average depths of Tenkiller,	
4	Hugo	and Sardis?	
5	A	Hugo is 11.9 feet, Sardis is 20.2 feet and	11:33AM
6	Tenk:	iller 50.7 feet.	
7	Q	So Hugo is about four times shallower than	
8	Tenk	iller?	
9	A	Yes.	
10	Q	And Sardis is about two and a half times	11:33AM
11	shal	lower?	
12	A	Yes.	
13	Q	Okay. Can these differences in average depth have	
14	an i	mpact on water quality, all the things being equal?	
15	A	Yes.	11:33AM
16	Q	Did you consider those differences when you did	
17	your	analysis?	
18	A	Yes.	
19	Q	And how did you consider those?	
20	A	Just in looking at how they might have impacted	11:33AM
21	wate	r quality in order to keep that in mind as we made	
22	the	comparisons among them.	
23	Q	And how did you account for the differences?	
24	A	Not in any quantitative way, just sort of, say,	
25	well	, how would these differences be important and does	11:33AM

		Page 325
1	that color the comparison in such a way as to make it	11:34AM
2	invalid.	
3	Q Well, how can the differences in depth have an	
4	impact on water quality during the summer months?	
5	A They can have an impact in terms of how the	11:34AM
6	epilimnion is set up in the lakes, how deep the	
7	epilimnion is, how much vertical mixing occurs between	
8	the epilimnion and hyperlimnion. There could be some	
9	impacts in terms of sedimentation in the different	
10	reservoirs.	11:34AM
11	Q If there is mixing, could that have an impact on	
12	the phosphorus in the epilimnion?	
13	A Yes.	
14	Q So it could increase if the reservoir is mixing	
15	during the summer it could increase the phosphorus in	11:34AM
16	the epilimnion?	
17	A Possibly.	
18	Q Did you determine whether that was, in fact,	
19	occurring in Hugo and Sardis?	
20	A No.	11:35AM
21	Q You didn't determine that one way or the other?	
22	A No.	
23	Q Do you know what the relationship is between	
24	mixing depths to reservoir area?	
25	A Where?	11:35AM

Page 328 11:38AM the thermocline. I don't know if that's --1 2 No, sir? Q -- your definition. 3 I'm talking the mixing that occurs, for example, if you have a stratified lake during the fall, whether 11:38AM 5 the temperatures in the lake reach more of an 6 7 equilibrium so there's mixing from the bottom waters up to the top? 8 9 Α Yes. That's what I'm talking about. I'm talking about 11:38AM 10 mixing that occurs where bottom waters are moved up to 11 12 the top. Yes. 13 A That kind of mixing. 14 11:38AM Α Yet. 15 And did you determine whether or not Hugo and 16 Sardis mixing is similar to Tenkiller's mixing during 17 the summer months? 18 But during the summer months is when you would 19 11:38AM 20 have the turnover. Well, that's what my question is: Did you 21 determine whether or not Hugo and Sardis turnover 22 during the summer months, actually mix during the 23 24 summer months? 11:38AM 25 No. Α

		Page 329
1	Q Okay. Wouldn't that be important to determine	11:38AM
2	whether or not there's additional phosphorus in the	
3	epilimnion available for algal growth?	
4	A That could be, yes.	
5	Q I'm going to hand you a series of BUMP reports.	11:40AM
6	Do you know what the BUMP reports are, sir?	
7	A Yes.	
8	Q What are they?	
9	A They're reports from a program that's called a	
10	Beneficial Use Monitoring Program that the State	11:41AM
11	conducts to evaluate water quality throughout the	
12	state.	
13	Q I've handed you Exhibit 17, which is the BUMP	
14	report for Tenkiller for 2001 through 2002. And then	
15	18, which the BUMP report for Sardis for 2002-2003.	11:41AM
16	And 19, which is the BUMP report for Hugo of 2002 to	
17	2003?	
18	A Mm-hmm.	
19	MR. TODD: So, David, did you intend to say	
20	the first one was 2001 to 2002?	11:41AM
21	MR. PAGE: Yeah, I said it was. They didn't	,
22	take they do these every five years and Tenkiller	
23	was on a little different annual basis, you probably	
24	noticed that yourself, than was Sardis, is that	
25	correct?	11:42AM

Page 333 believe there's not -- there is the same amount of 11:48AM 1 vertical mixing during the summer between Tenkiller and 2 Is that your testimony? 3 Sardis? My testimony is that based on the information we 4 have, which as I indicate here is one day, that there's 11:48AM 5 no evidence of differences in vertical stratification 6 over the same depth intervals. 7 What about with regard to Hugo? Do you have the 8 same opinion that there's -- that there's vertical stratification in Hugo similar to that at Tenkiller? 11:48AM 10 For this time period, no, they're different. 11 There is a much less vertical stratification in Hugo 12 than we see in the profiles for Tenkiller or Sardis. 13 If that was consistent throughout the summer year 14 11:49AM in year out, would that indicate that Hugo and 15 Tenkiller would have different water quality impacts 16 due to that different stratification? 17 There could be some differences associated with 18 that difference. 19 11:49AM Did you look at any of the other BUMP reports to 20 determine whether there's a similar pattern in other 21 22 years? MR. TODD: Object to form. Asked and 23 24 answered. 11:50AM Yes. 25 Α

		Page 336
1	looking at average, it's probably somewhere between	11:53AM
2	Lake 04 and Lake 03.	
3	Q Okay. Did you limit your comparison of Lake	
4	Tenkiller with Hugo and Sardis to just the Lake 4 and	
5	Lake 3 region?	11:53AM
6	A No.	
7	Q Why not if that's what the where the depths	
8	were the most similar?	
9	A Because depth is not the only parameter we're	
10	looking at here.	11:54AM
11	Q But it is one that affects water quality, correct?	
12	A It is one that can affect water quality.	
13	Q So would it be more fair just to look at the	·
14	similar depth areas in order to see whether or not	
15	Tenkiller and Hugo and Sardis have similar	11:54AM
16	characteristics?	
17	MR. TODD: Object to form.	
18	A I don't think so but I would admit to being	
19	uncertain.	
20	Q Okay. Look at Page 2-28, sir, 2-28 of your	11:54AM
21	report, and if you can get out in front of you the	
22	second page of Exhibit 14 and I want to look at some of	
23	these chlorophyll-a numbers that we that you've	
24	discussed on Page 2-28. Would you read in the full	
25	paragraph there on Page 2-28, could you read the second	11:55AM
